

Extreme Weather Calls for Enhanced Protection

Extreme weather events are having a greater impact on shipments these days—and these events are becoming even more frequent.

Here are a few ways to safeguard against the havoc climate risk can bring—now and in the future.

- Inventory at rest is at risk to threats like fires and floods. Ensure your warehouse stockpile is protected and doesn't become a total loss if a disaster comes through.
- Late delivery due to severe weather impacting the supply chain could mean unhappy customers.
 Diversify your supply sources so there are multiple lines of inventory coming in.
- Add solutions like weather-stabilizing shipment packaging to offset the potential for an increase in damaged or expired packages.
- Ensure you have the proper coverage in place for your shipping and warehoused goods so you have peace of mind that you're protected—saving your reputation and bottom line.

77% of shoppers

believe that extra steps are needed to protect their orders from weather issues.¹

28% of shoppers

reported an increase in damaged, spoiled, or lost packages due to extreme weather.¹
